Application/Control Number: 10/009,298

Art Unit: 2614

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 4 and 9-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Gangitano.

The television system of Gangitano (noting particularly Figs. 3, 4, 7 and 8) includes a direct broadcast satellite receiver (col. 1 lines 13-14) which by standard incorporates digital signals (in MPEG format). Tuner 30 (Fig. 7) by definition enables selection of a TV signal from a plurality of available signals; CPU 36 provides various control operations including that of the signal processing; element 22 (shown in Fig. 4) determines the signal strength of the selected TV signal; as shown in Fig. 8, CPU 36 further enables the TV signal to be displayed alone when the signal strength is detected to be at an acceptable level (block 106) and in a second mode displays a strength indicator signal superimposed over the TV signal (block 108) by virtue of element 34 shown in Fig. 7, thereby meeting claim 1.

As for claim 2, signal strength is continuously checked (therefore updated), as discussed in col. 5 lines 38-43).

As for claim 4, the signal strength is measured for each TV signal available, and an indication of signal strength is displayed while the TV signal (with typically accompanying audio) is active, as discussed above.

Application/Control Number: 10/009,298

Art Unit: 2614

Regarding claims 9 and 10, the signal strength is an indication of the position of antenna 12, and the position is adjusted to a position that provides the optimum signal reception (col. 3 lines 53-62; col. 5 lines 38-46).

As for claim 11, the TV signals (received as digital signals from DBS receiver 14) are presentable as normal signals during real-time display of the signal strength indicator (noting again Figs. 7 and 8).

- 2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 3. Claims 3 and 5-8 appear allowable over the prior art.
- 4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Victor R. Kostak whose telephone number is 703 305-4374. The examiner can normally be reached on Monday Friday from 6:30am-3:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John W. Miller can be reached on 703 305-4795. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
